

## CIT 249: Java II

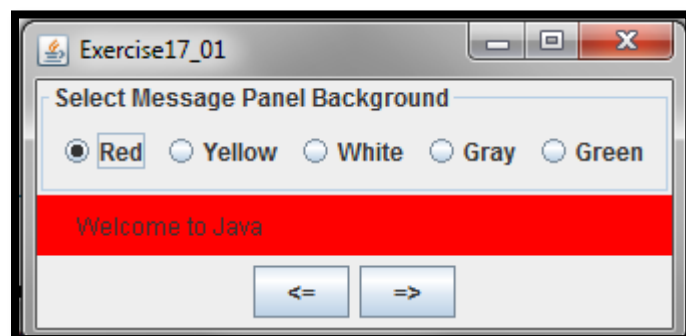

### Chapter 17

### Programming Assignment 1

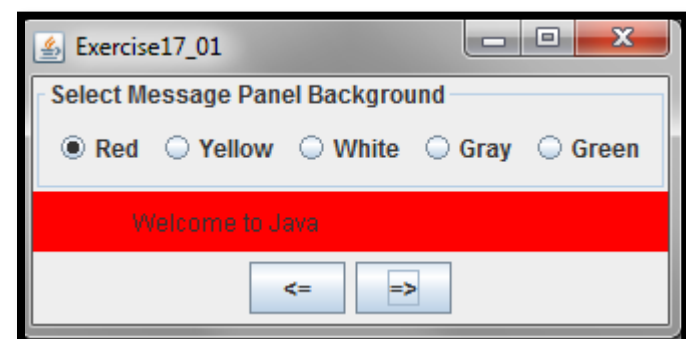

Complete #1 on page 664. When run the program will display as:

If one of the radio buttons is selected the background color of the text field will change to that color:

If either of the buttons is pressed the text will move in that direction.

You are to create two separate classes. A MessagePanel class that will set up the message panel and set the x coordinates so that the text will increase or decrease at 10 pixel intervals when the buttons are pressed.

The second class will set up the remainder of the screen including the creation of a MessagePanel object to set up the message. When the buttons are pressed the x coordinate is increased for the MessagePanel.

Feel free to ask questions if you fail to understand this assignment.
